

SUPER DUTY RAM CYLINDERS FOR 4¼', 5½' AND 7' HD SYMONS™ CRUSHERS

New Super Duty Ram Cylinder

- Problem:** Current Ram cylinders on the Symons Cone Crushers have many problems
1. Non standard fittings break while tightening
 2. Rocks fall on top and damage the fittings and tubing
 3. Cylinder design is outdated causing premature leaks
 4. Hinge pin is too tight making it difficult to lift the Ram to change direction
 5. The gland is retained by a snap ring which can break or pop out of the groove at 3000 psi system pressure making the Ram useless

- Solution:** Innotech is now offering a Super duty Ram design that addresses all of these problems
1. We use JIC fittings that are rugged and easy to tighten
 2. A steel plate on top protects the hoses and fittings
 3. Cylinder design is completely updated for ruggedness and long life
 4. The sleeve and the hinge pin have sufficient clearance for Ram to freely pivot
 5. Our Ram's gland is threaded in and can take the 3000 psi pressure without a problem
 6. Now you can buy just the Ram cylinder and install it into your existing retainer
 7. Save thousands of dollars.
 8. Mostly available from stock
